

**Book for the master study:**

**CONTROL - ORIENTED MODELLING AND SIMULATION: METHODS AND TOOLS**

<b>1. INTRODUCTION (cca 10 pages)</b>	<b>1</b>
<b>2. MODEL PRESENTATION (cca 35 pages)</b>	<b>11</b>
2.1 Parametric and non-parametric models	
2.2 MATLAB and Control System Toolbox	
2.2.1 Introduction to MATLAB	
2.2.2 Introduction to Control System Toolbox	
2.3 Laboratory of Mathematical Model Toolbox	
2.3.1 Graphical User Interface and files' organization	
2.3.2 Analysis Toolbox	
<b>3. SIMULATION (cca 100 pages)</b>	<b>46</b>
3.1 Introduction	
3.2 Simulation schemes	
3.3 Digital simulation of continuous models	
3.3.1 Simulation with Matlab	
3.4 Simulink	
3.4.1 Introduction to Simulink	
3.4.2 Simulation experiments	
3.4.2.1 Parametrization	
3.4.2.2 Optimization	
3.4.2.3 Linearization	
3.5 Further procedures concerning reliable simulation results	
3.5.1 Numerical integration methods	
3.5.1.1 General form of numerical integration formulae	
3.5.1.2 Types of numerical integration errors	
3.5.1.3 Single-step integration methods	
3.5.1.4 Multistep integration methods	
3.5.1.5 Extrapolation methods	
3.5.1.6 Integration methods for stiff systems	
3.5.1.7 Choice of the calculation interval and strategies for its control	
3.5.1.8 Integration method selection	
3.5.2 Algebraic loop problems	
<b>4. MODELLING FOR CONTROL (cca 50 pages)</b>	<b>146</b>
4.1 Theoretical modelling vs. identification	
4.2 Identification models	
4.2.1 Parametric models	
4.2.2. Non-parametric models	
4.3 Parametric identification methods	
4.3.1. The Strejc model parameters identification	
4.3.1. Model tuning methods	

4.3.2. System identification based on linear regression	
4.4 Identification of non-parametric models	
<b>5. BASIC CONCEPTS OF CONTROL (cca 15 pages)</b>	<b>196</b>
5.1 Why to control?	
5.2 Open-loop control system	
5.3 Closed-loop control system	
5.4 Control system in the operating point	
5.5 Reference tracking mode of the closed-loop control system	
5.6 Disturbance rejection mode of the closed-loop control system	
5.7 Steady state of the control system	
5.8 Stability of the control system	
<b>6. INDUSTRIAL CONTROL ALGORITHMS (cca 65 pages)</b>	<b>211</b>
6.1 Types of industrial controllers	
6.2 Continuous controllers	
6.2.1 Proportional controllers	
6.2.2 Proportional - integral controllers	
6.2.3 Controllers with differential term	
6.3 Design of continuous proportional-integral-differential controllers	
6.3.1 Tuning rules	
6.3.2 Computer optimization	
6.4 Realization of PID controllers	
6.5 Multi step controllers	
6.5.1 ON-OFF controllers	
6.5.2 ON-OFF control of the proportional processes	
6.6 Multi loop control systems	
6.6.1 Feed forward compensation	
6.6.2 Cascade control	
<b>7. DISCRETE-EVENT MODELLING AND SIMULATION (cca 40 pages)</b>	<b>276</b>
7.1 Discrete event systems	
7.1.1 Events and random variables	
7.1.2 Random processes	
7.2 Discrete event simulation strategies	
7.2.1 Event scheduling scheme	
7.2.2 Activity scanning scheme	
7.2.3 Process-oriented simulation scheme	
7.3 Queuing systems and Simulink-SimEvents	
7.3.1 Queues and servers	
7.3.1 Generation of events and entities	
7.3.2 Performance measures	
7.4 Simulation experiments with SimEvents
